

## PRACTICE #06: WEB PROGRAMMING

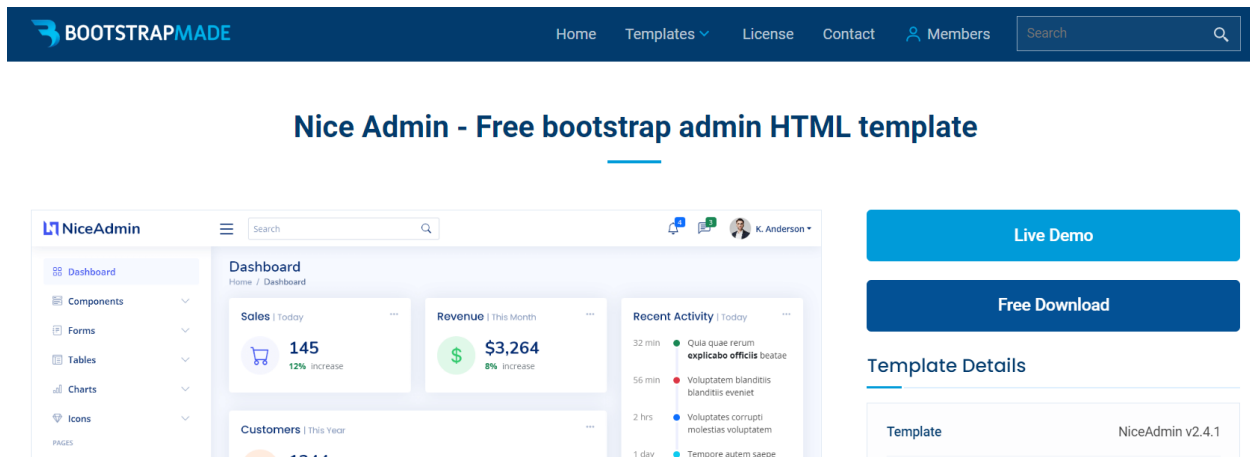

### Lesson: Create an Admin page

**Preparatin:** Downloa NiceAdmin template as follows

- Open the following link:

<https://bootstrapmade.com/nice-admin-bootstrap-admin-html-template/>

- Choose Free dowload/Free Template to get NiceAdmin template

- Extract the file and run **index.html**, the template looks like this:

- The following steps in order to create an admin page and get menu from the database (int the table AdminMenu).

1. Create the table **AdminMenu** in the database **aznews**, where **AdminMenuID** is set to auto increase.

LAPTOP-4H0JB0M....- dbo.AdminMenu				LAPTOP-4H0JB0M....- dbo.AdminMenu X			
	Column Name	Data Type	Allow Nulls				
	AdminMenuID	bigint	<input type="checkbox"/>				
	ItemName	nvarchar(50)	<input checked="" type="checkbox"/>				
	ItemLevel	int	<input checked="" type="checkbox"/>				
	ParentLevel	int	<input checked="" type="checkbox"/>				
	ItemOrder	int	<input checked="" type="checkbox"/>				
	IsActive	bit	<input checked="" type="checkbox"/>				
	ItemTarget	nvarchar(20)	<input checked="" type="checkbox"/>				
	AreaName	nvarchar(20)	<input checked="" type="checkbox"/>				
	ControllerName	nvarchar(20)	<input checked="" type="checkbox"/>				
	ActionName	nvarchar(20)	<input checked="" type="checkbox"/>				
	Icon	nvarchar(50)	<input checked="" type="checkbox"/>				
	IdName	nvarchar(50)	<input checked="" type="checkbox"/>				

- Add some information as follows

LAPTOP-4H0JB0M....- dbo.AdminMenu X												
AdminMen...	ItemName	ItemLevel	ParentLevel	ItemOrder	IsActive	ItemTarget	AreaName	Controller...	ActionName	Icon		IdName
1	Bảng điều khiển	0	0	1	False	NULL	Admin	Home	Index	NULL		NULL
2	Thông tin cá nhân	0	0	1	False	NULL	Admin	Home	Index	NULL		NULL
3	Hướng dẫn sử dụng	0	0	2	False	NULL	Admin	Home	Index	NULL		NULL
4	Liên lạc	0	0	3	False	NULL	Admin	Home	Index	NULL		NULL
5	Đăng xuất	0	0	4	False	NULL	Admin	Home	Index	NULL		NULL
6	Quản lý bài viết	1	0	1	True	components-nav	Admin	Home	Index	bi bi-menu-button-wide	components-nav	NULL
7	Cập nhật bài viết	2	6	1	True	NULL	Admin	Home	Index	NULL		NULL
8	Duyệt và đăng bài viết	2	6	2	True	NULL	Admin	Home	Index	NULL		NULL
9	Bài viết đã đăng	2	6	3	True	NULL	Admin	Home	Index	NULL		NULL
10	Quản lý menu	1	0	1	True	forms-nav	Admin	Home	Index	bi bi-journal-text	forms-nav	NULL
11	Thêm mới menu	2	10	1	True	NULL	Admin	Home	Index	NULL		NULL
12	Chỉnh sửa menu	2	10	2	True	NULL	Admin	Home	Index	NULL		NULL
13	Quản lý slide	1	0	1	True	charts-nav	Admin	Home	Index	bi bi-bar-chart	charts-nav	NULL
14	Thêm mới slide	2	13	1	True	NULL	Admin	Home	Index	NULL		NULL
15	Chỉnh sửa slide	2	13	2	True	NULL	Admin	Home	Index	NULL		NULL

2. Open project **aznews**, open the terminal windows and install the following packages:

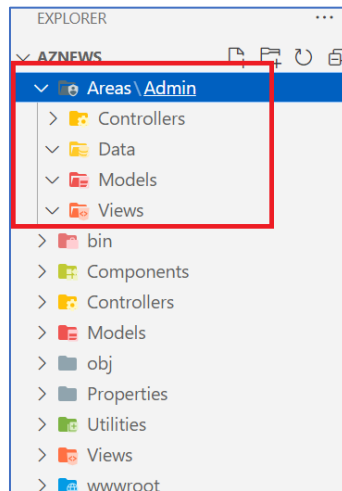

```
dotnet tool install -g dotnet-aspnet-codegenerator
```

```
dotnet add package Microsoft.VisualStudio.Web.CodeGeneration.Design
```

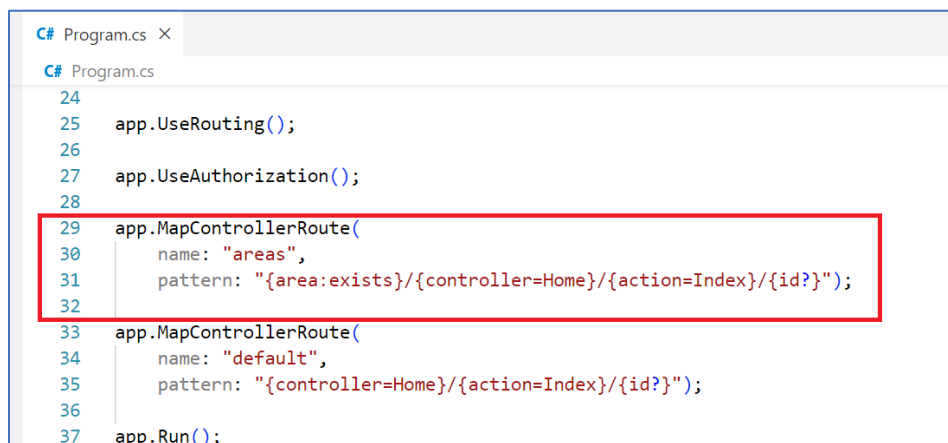

3. Create Admin folder using this command:

```
dotnet aspnet-codegenerator area Admin
```

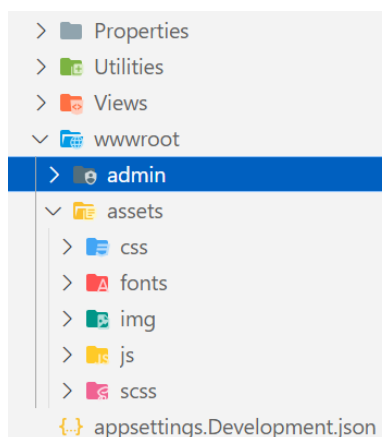

- After this command, we have the following folders:

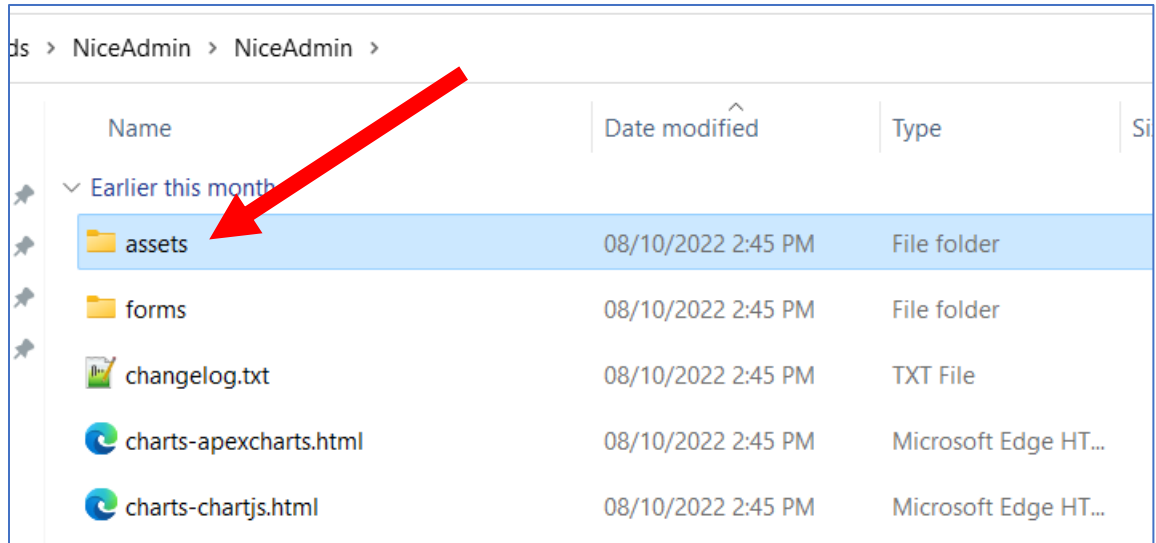

- Add to **Program.cs** the following code

4. Create a folder **admin** trong **wwwroot** (lowercase letters to avoid confusion with the Admin folder in Areas)

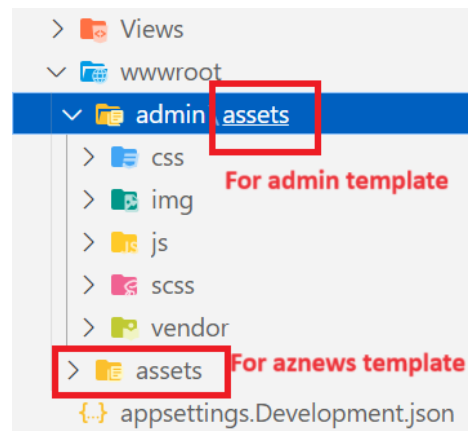

- Copy the **assets** folder into the template **NiceAdmin** into **wwwroot/admin**

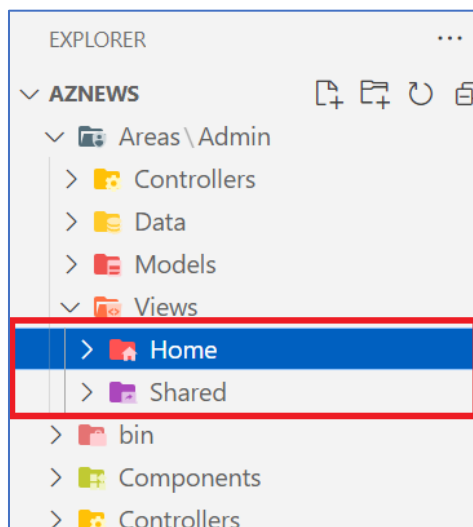

ds > NiceAdmin > NiceAdmin >

Name	Date modified	Type	Size
Earlier this month			
assets	08/10/2022 2:45 PM	File folder	
forms	08/10/2022 2:45 PM	File folder	
changelog.txt	08/10/2022 2:45 PM	TXT File	
charts-apexcharts.html	08/10/2022 2:45 PM	Microsoft Edge HT...	
charts-chartjs.html	08/10/2022 2:45 PM	Microsoft Edge HT...	

- After that, we have:

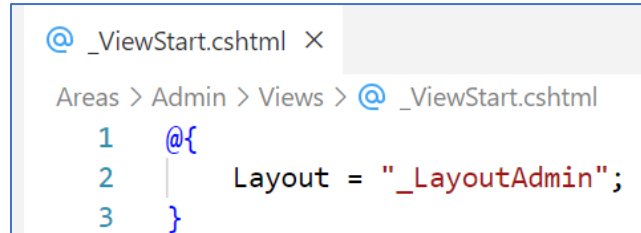

5. In the Views of Admin, create the following folders: **Home**, **Shared**

- In the folder **Admin/Views** create a file **\_ViewStart.cshtml**:

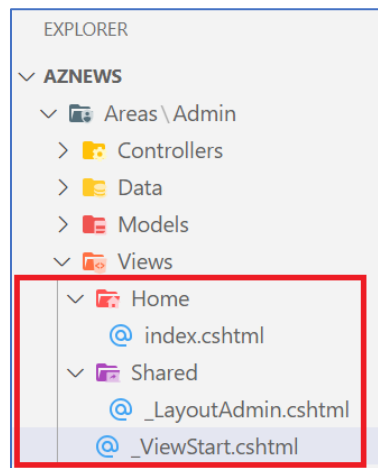

Add the following information:

```
@ _ViewStart.cshtml X
Areas > Admin > Views > @ _ViewStart.cshtml
1 @{
2     Layout = "_LayoutAdmin";
3 }
```

- In the folder **Admin/Views/Home** create a file **Index.cshtml**;

- In the folder **Admin/Views/Shared**, create a file **\_LayoutAdmin.cshtml**;

6. Copy all the content in the **index.html** of **template NiceAdmin**, and **paste** in to the file **\_LayoutAdmin.cshtml**.

```

@ _LayoutAdmin.cshtml X
Areas > Admin > Views > Shared > @ _LayoutAdmin.cshtml
1  <!DOCTYPE html>
2  <html lang="en">
3
4  <head>
5      <meta charset="utf-8">
6      <meta content="width=device-width, initial-scale=1.0" name="viewport">
7
8      <title>Dashboard - NiceAdmin Bootstrap Template</title>
9      <meta content="" name="description">
10     <meta content="" name="keywords">
11
12     <!-- Favicons -->
13     <link href="assets/img/favicon.png" rel="icon">
14     <link href="assets/img/apple-touch-icon.png" rel="apple-touch-icon">
15
16     <!-- Google Fonts -->
17     <link href="https://fonts.gstatic.com" rel="preconnect">

```

- Replate content (CTRL + H): **assets/** → **~/admin/assets/**
- Click Replace all (the red square)

```

@ _LayoutAdmin.cshtml X
Areas > Admin > Views > Shared > @ _LayoutAdmin.cshtml
4  <head>
17  <link href="https://fonts.gstatic.com" rel="
18  <link href="https://fonts.googleapis.com/css
19
20  <!-- Vendor CSS Files -->
21  <link href="assets/vendor/bootstrap/css/bootstrap.min.css" rel="stylesheet">
22  <link href="assets/vendor/bootstrap-icons/bootstrap-icons.css" rel="stylesheet">
23  <link href="assets/vendor/boxicons/css/boxicons.min.css" rel="stylesheet">
24  <link href="assets/vendor/quill/quill.snow.css" rel="stylesheet">
25  <link href="assets/vendor/quill/quill.bubble.css" rel="stylesheet">
26  <link href="assets/vendor/remixicon/remixicon.css" rel="stylesheet">
27  <link href="assets/vendor/simple-datatables/style.css" rel="stylesheet">
28
29  <!-- Template Main CSS File -->
30  <link href="assets/css/style.css" rel="stylesheet">
31
32

```

7. In the file **\_LayoutAdmin.cshtml**, find the folowing code

```

506 </aside><!-- End Sidebar-->
507
508 > <main id="main" class="main">...
1154 </main><!-- End #main -->
1155
1156 <!-- ===== Footer ===== -->
1157 <footer id="footer" class="footer">

```

- Cut all the content from `<main id="main" class="main"> ... </main>` (Ctrl + X) and paste this content to **index.cshtml** in the folder **Home** of **Admin**.

- Add **@RenderBody()** in the file **\_LayoutAdmin.cshtml** (replate the main content).

8. In the folder **Controllers** of **Admin**, add a controller **HomeController.cs** as follows (remember adding the line `[Area("Admin")]`):

```

C# HomeController.cs X
Areas > Admin > Controllers > C# HomeController.cs > ...
1  using Microsoft.AspNetCore.Mvc;
2
3  namespace aznews.Areas.Admin.Controllers;
4
5  [Area("Admin")]
   0 references
6  public class HomeController : Controller
7  {
   0 references
8      public IActionResult Index()
9      {
10         return View();
11     }
12
13 }

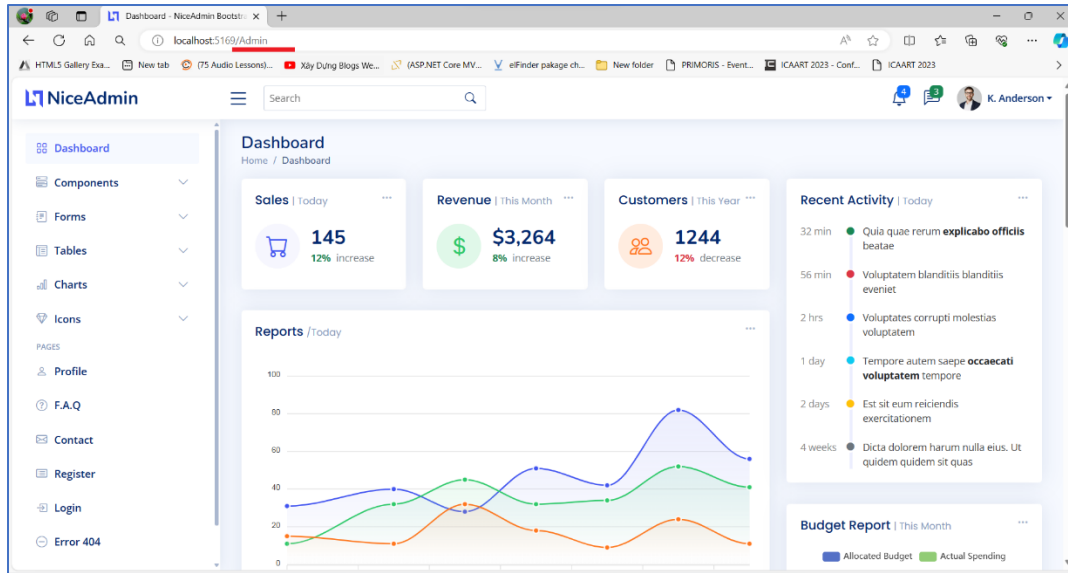

```

9. Run and have a fun!

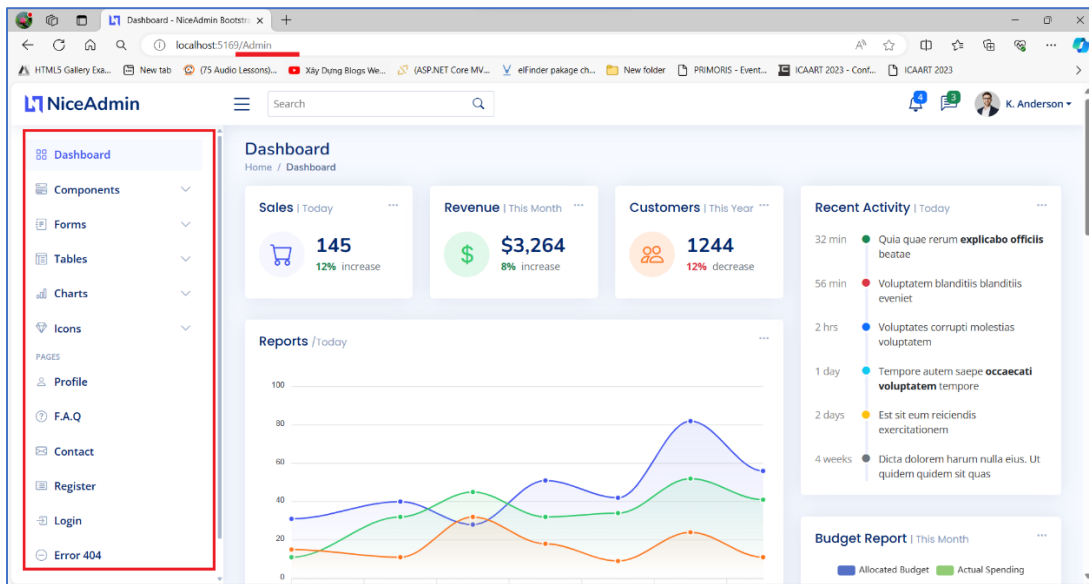

- Add **/Admin** after url in the browse

- For example: <https://localhost:xxx/Admin>

- The following template will be displayed

## GET THE MENU FROM THE DATABASE

10. Create a model **AdminMenu.cs** in the folder **Models** of **Admin**

(Right click on **Models**, choose **New C# Class**, type **AdminMenu.cs**, Enter)

- Add the following information

```

C# AdminMenu.cs X
Areas > Admin > Models > C# AdminMenu.cs > AdminMenu
2 using System.ComponentModel.DataAnnotations;
3
4 namespace aznews.Areas.Admin.Models
5 {
6     [Table("AdminMenu")]
7     1 reference
8     public class AdminMenu
9     {
10         [Key]
11         0 references
12         public long AdminMenuID { get; set; }
13         0 references
14         public string? ItemName { get; set; }
15         0 references
16         public int ItemLevel { get; set; }
17         0 references
18         public int ParentLevel { get; set; }
19         0 references
20         public int ItemOrder { get; set; }
21         1 reference
22         public bool? IsActive { get; set; }
23         0 references
24         public string? ItemTarget { get; set; }
25         0 references
26         public string? AreaName { get; set; }
27         0 references
28         public string? ControllerName { get; set; }
29         0 references
30         public string? ActionName { get; set; }
31         0 references
32         public string? Icon { get; set; }
33         0 references
34         public string? IdName { get; set; }
35     }
36 }

```

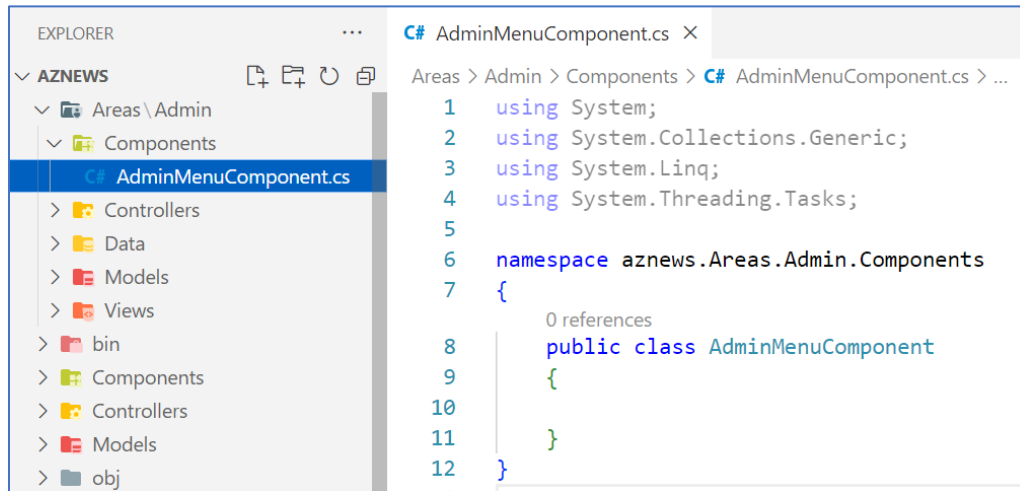

11. Add the following line in the file **DataContext.cs**

```

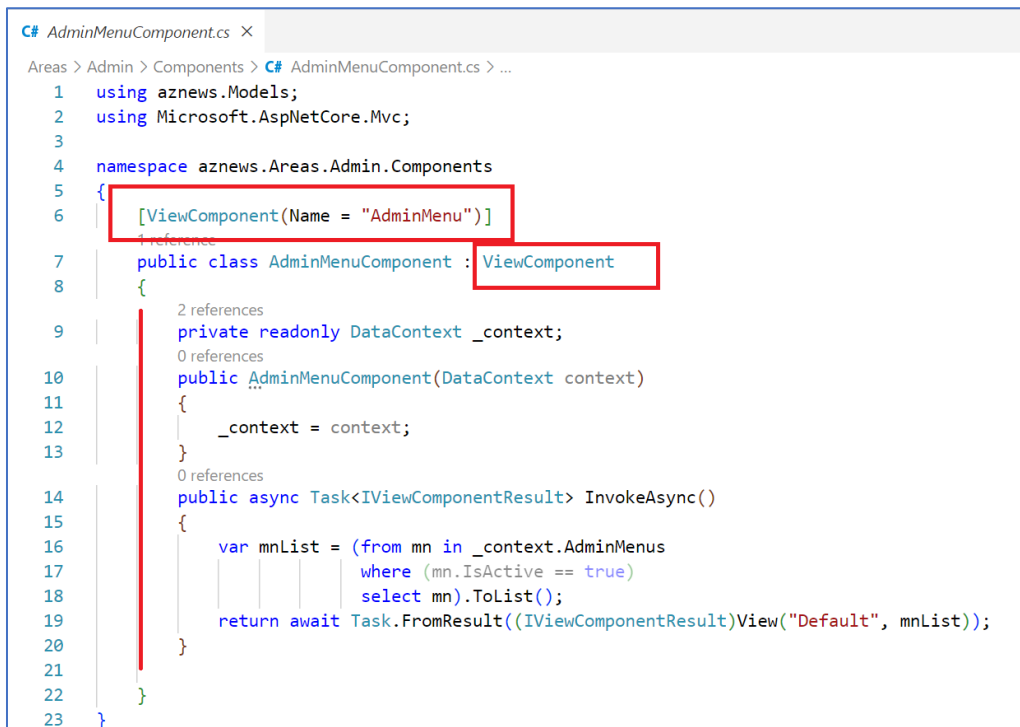

C# DataContext.cs X
Models > C# DataContext.cs >
1 using aznews.Areas.Admin.Models;
2 using Microsoft.EntityFrameworkCore;
3
4 namespace aznews.Models
5 {
6     9 references
7     public class DataContext : DbContext
8     {
9         0 references
10         public DataContext(DbContextOptions<DataContext> options) : base(options)
11         {
12         }
13         1 reference
14         public DbSet<tblMenu> Menus { get; set; }
15         2 references
16         public DbSet<viewPostMenu> viewPostMenus { get; set; }
17         0 references
18         public DbSet<AdminMenu> AdminMenus { get; set; }
19     }
20 }

```

12. Create a folder **Components** in **Admin**, and then add a class in the **Components** named **AdminMenuComponent.cs** (Right click on **Components**, choose **New C# Class**, type **AdminMenuComponent.cs**, Enter)

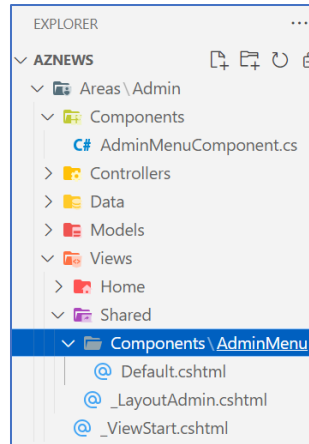

- Add the following content in **AdminMenuComponent.cs**

13.

- Create a folder **Components** in **Admin/Views/Shared**
- Create a folder **AdminMenu** in **Admin/Views/Shared/Components**
- Create a view **Default.cshtml** in the folder **AdminMenu**

14. Open the file **\_LayoutAdmin.cshtml**, cut all content sidebar and paste to the file **Default.cshtml** in **Components/AdminMenu**

```
@ _LayoutAdmin.cshtml X
Areas > Admin > Views > Shared > @ _LayoutAdmin.cshtml
40 <body>
43 <header id="header" class="header fixed-top d-flex align-items-center">
269 </header><!-- End Header -->
270
271 <!-- ===== Sidebar ===== -->
272 > <aside id="sidebar" class="sidebar">...
506 </aside><!-- End Sidebar-->
507
508 @RenderBody()
509
510 <!-- ===== Footer ===== -->
511 <footer id="footer" class="footer">
```

- Open **\_LayoutAdmin.cshtml** again

- Add the following line:

```
@ _LayoutAdmin.cshtml X
Areas > Admin > Views > Shared > @ _LayoutAdmin.cshtml
40 <body>
43 <header id="header" class="header fixed-top d-flex align-items-center">
269 </header><!-- End Header -->
270
271 <!-- ===== Sidebar ===== -->
272 @await Component.InvokeAsync("AdminMenu")
273 <!-- End Sidebar-->
274
275 @RenderBody()
```

15. Open the file **Default.cshtml** in the folder **Components/AdminMenu**

- Collapsed, we have the following code:

```
@ Default.cshtml X
Areas > Admin > Views > Shared > Components > AdminMenu > @ Default.cshtml
1  <aside id="sidebar" class="sidebar">
3    <ul class="sidebar-nav" id="sidebar-nav">
5      <li class="nav-item">
6        <a class="nav-link" href="index.html">
9          </a>
10       </li><!-- End Dashboard Nav -->
11
12 > <li class="nav-item">...
88 </li><!-- End Components Nav -->
89
90 > <li class="nav-item">...
116 </li><!-- End Forms Nav -->
117
118 > <li class="nav-item">...
134 </li><!-- End Tables Nav -->
135
136 > <li class="nav-item">...
157 </li><!-- End Charts Nav -->
158
159 > <li class="nav-item">...
180 </li><!-- End Icons Nav -->
```

- These codes are almost identical; we only need to keep one of them, for example:

```
@ Default.cshtml X
Areas > Admin > Views > Shared > Components > AdminMenu > @ Default.cshtml
1  <aside id="sidebar" class="sidebar">
3    <ul class="sidebar-nav" id="sidebar-nav">
5      <li class="nav-item">
6        <a class="nav-link" href="index.html">
9          </a>
10       </li><!-- End Dashboard Nav -->
11
12 > <li class="nav-item">...
38 </li><!-- End Forms Nav -->
39
40 <li class="nav-heading">Pages</li>
```

16. Add the following line to the top of the file **Default.cshtml**

```
@ Default.cshtml X
Areas > Admin > Views > Shared > Components > AdminMenu > @ Default.cshtml
1  @using aznews.Areas.Admin.Models
2  @model IList<AdminMenu>
3
4  <aside id="sidebar" class="sidebar">
5
6    <ul class="sidebar-nav" id="sidebar-nav">
7
```

- Replace the following code after <!-- End Dashboard Nav --> as follows:

```

8      <li class="nav-item">
9          <a class="nav-link" href="#">
10             <i class="bi bi-grid"></i>
11             <span>Bảng điều khiển</span>
12          </a>
13      </li><!-- End Dashboard Nav -->
14
15      @foreach (var item in Model.Where(m => m.ItemLevel == 1).OrderBy(m => m.ItemOrder))
16      {
17          var pID = item.AdminMenuID;
18          var sMenu = Model.Where(p => p.ParentLevel == pID).OrderBy(p => p.ItemOrder).ToList();
19          <li class="nav-item">
20              <a class="nav-link collapsed" data-bs-target="#@item.ItemTarget" data-bs-toggle="collapse" href="#">
21                  <i class="@item.Icon"></i><span>@item.ItemName</span><i class="bi bi-chevron-down ms-auto"></i>
22              </a>
23              @if (sMenu != null)
24              {
25                  <ul id="@item.IdName" class="nav-content collapse" data-bs-parent="#sidebar-nav">
26                      @foreach(var smn in sMenu)
27                      {
28                          <li>
29                              <a href="/Admin/@smn.ControllerName/@smn.ActionName">
30                                  <i class="bi bi-circle"></i><span>@smn.ItemName</span>
31                              </a>
32                          </li>
33                      }
34                  </ul>
35              }
36          </li>
37      }
38
39      <li class="nav-heading">Pages</li>
40
41      <li class="nav-item">
42          <a class="nav-link collapsed" href="users-profile.html">

```

- Run the code, add /Admin after the current url, you will have:
